Hard pass

Or how to protect your passwords

Vos mots de passe ne sont pas en sécurité!

"In 2016, billions of accounts were leaked to internet from LinkedIn, TumbIr, MySpace, Last.FM, Yahoo!, VK.com and Gmail"

"LastPass Leaking Passwords"

https://www.darknet.org.uk/2017/03/lastpass-chrome-extension-leaking-passwords/

Un bon mot de passe

- Non réutilisé
- Non prévisible

Notre solution

- Un seul mot de passe « maître » à mémoriser
- Mot de passe généré pour chaque domaine domain_pwd = hash(master_pwd, domain)

Notre solution

- Un seul mot de passe « maître » à mémoriser
- Mot de passe généré pour chaque domaine domain_pwd = hash(master_pwd, domain)

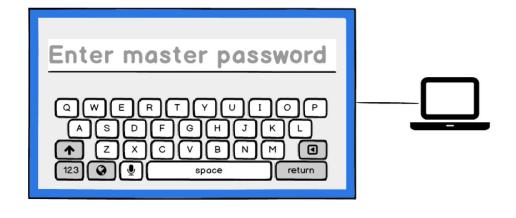

- Critères
 - Unique ✓
 - Mot de passe complexe
 - Stocké nulle part

Notre proposition: architecture
